# Turbonomic 7.22.9 REST API Changes

September 25, 2020

This document describes issues that result in changes to the REST API. It is a running list of changes that accumulates these changes until the next release of the API Programming Guide. When we release a new version of the programming guide, it will include these changes. At that time, the list will start with new change to the API.

Because the API is a full reflection of the Turbonomic product, some changes to the product necessarily cause changes in the API. This can include bug fixes and improvements to the product. For example, we might add new commodities that you can get for a given entity type. Or a bug fix might change the data that is returned by an API request. We strive to make these changes backward-compatible whenever possible.

## REST API Changes

- **Known Issue:**

Fix Version: 8.0

Fix Version: 8.0.1

When loading diagnostics from one instance to another of a different upgrade path, changes made to naming conventions may prevent the diagnostics from completely loading.

- **Known Issue:**

Fix Version: 8.0.1

Under some circumstances, the logs can show the following error:

```
The following settings don't have a mapping in the API component. Not returning them to the user. Settings: [remainingGcCapacityUtilization, responseTimeCapacity, autoSetResponseTimeCapacity, transactionsCapacity, autoSetTransactionsCapacity]
```

This occurs because these settings have been deprecated.
