NOTE:

This release fixes the following issues, and these release notes only document those fixes. For more general release information, see the release notes for Turbonomic version 8.4.7. The 8.4.7 release notes include sections for What's New, Configuration Issues, and Known Issues that also pertain to this release.

Fixed Issues

- **Fixed Issue:**

- **Customer Issue 119436**

For Azure, under some circumstances analysis gives incorrect memory utilization values for VMs.

For Azure environments, because of changes to the Azure APIs, Turbonomic analysis can result in incorrect memory utilization values for VMs.
